

Weather and climate.

Even though the Galapagos islands sit on the equator, it surprisingly isn't tropical. The temperature is usually 25 degrees or even warmer.

During January and June its the warm season, whereas during July and December is the dry season. Overall the Galapagos has good weather for visiting all year round.

Activities

Activities consists of snorkelling, kayaking ,etc and the list is endless.The Galapagos Islands is regarded as one of the top scuba diving destinations in the world. And no wonder, with the ability to see marine iguanas, white tip reef sharks, hammerheads, whale sharks, sea lions, sting rays, golden rays, eagle rays, invertebrates, morays, garden eels, turtles, whales, pelagic

History

The Galapagos marine iguana is the only marine lizard in the world. A young Charles Darwin travelled here aboard the HMS Beagle to develop his fantastic theory of evolution. The stark, rocky islands - many with few plants - made it possible for life to flourish here. The Galapagos is a truly special place for naturalists and travellers.

Cruises

The Galapagos Islands are unlike anywhere else on Earth- an exotic haven of flora and fauna found nowhere else. A once in a lifetime voyage to this mysterious, unspoilt corner of the word
