

Newham Bridge Science Vision

We inspire children to explore science through their own curiosity. They will experience well-sequenced, engaging learning opportunities that will build on prior learning and deepen understanding. Teachers will model strong working scientifically skills and use a wide range of approaches to ensure learning is challenging, yet accessible for all. Children will investigate, question, and connect science to their own interests, allowing them to develop into confident and knowledgeable young scientists.

Newham Bridge Science Principles

- We listen, contribute and engage in science lessons.
- We can understand and use some scientific vocabulary.
- We ask questions and discuss ideas to deepen our understanding.
- We use our prior learning and skills when working to solve scientific problems.
- We make connections between our learning and science in everyday life.
